

# BROAN<sup>®</sup> NuTone<sup>®</sup>

Turn any fan into a humidity sensing solution.

**Satisfy the requirements of local codes and stringent inspections.** Proven Sensaire<sup>®</sup> technology in a decorator wall control can take care of fog on mirrors before it even forms. Sensaire<sup>®</sup> detects a rise in humidity and automatically turns the fan on. As humidity levels return to normal, the control shuts the fan off automatically. What's more, in continuous ventilation mode you have a solution that meets ASHRAE 62.2 requirements. Smart and sensible. That's Sensaire<sup>®</sup>.

\*Patent pending

Traditional 3-wire installation—no special connections.

Precise, easy-adjustment controls.

Faceplate not included.

Exclusive Sensaire<sup>®</sup> humidity sensing technology is now available in a decorator wall control.

#### Model 82W Control Features

- Exclusive Sensaire<sup>®</sup> humidity sensing technology responds to increases in humidity to automatically turn fan on before moisture forms on mirrors
- Relative humidity setpoint mode (50%–80% range to satisfy California requirements)
- Precise sensitivity adjustment can be set by user so fan works when homeowner wants it to regardless of climate or season
- User-adjustable automatic shutoff timer for customized run-time in different bathrooms
- Continuous ventilation mode operates fan for set minutes per hour to achieve targeted average CFM level and meet ASHRAE 62.2 requirements
- Compatible with any existing fan, and decorator-style design—with settings behind door—blends in with other controls
- LED fan "on" indicator
- Manual operation mode
- 120V, 4 amp
