

Know what you're breathing?

Clear the air with simple solutions from Broan.

According to a national survey, homeowners are aware that INDOOR AIR QUALITY (IAQ) is an issue but they don't take appropriate measures to prevent airborne pollutants and improve the air they breathe.

BROAN®

THE LEADER IN INDOOR AIR QUALITY

Most are aware

90% of American homeowners realize that poor indoor air quality can contribute to certain health issues and that healthy air could help prevent illness.

A majority (60%) of homeowners know that indoor air quality has a greater impact on their health than outdoor air quality.

But may not know

Only two in five (42%) worry about moisture that could cause mold or mildew.

Less than one-quarter (22%) actually worry about the poor air quality in their homes. They are much more concerned with bugs or intruders.

Only 33% of Americans know that the smell of food lasting in the home after it's been prepared is an indicator of poor IAQ.

81% don't know that a foggy mirror means poor IAQ.

41% of Americans say that their bathroom mirror fogs up when they shower.

And haven't acted

Less than half of Americans (46%) recognize that a lack of a bathroom fan has a negative impact on indoor air quality, and only 42% recognize that a lack of a range hood also has a negative impact.

Only 61% of American homeowners have a range hood, and only 33% of that group uses it nearly every time they cook; only 27% keep it on for 10 minutes after they're done cooking.

Nearly six in ten have a fan in each bathroom but only one in five keep it on for ten minutes after showering. Only 7% say that they change it when their mirrors start fogging up.

These Broan products solve indoor air quality issues.

Keep humidity levels in check.

Clear the kitchen air.

Strike some balance.

Whole Home Mechanical Ventilation

Continuous Run Exhaust Strategy
w/ Boost Spot Ventilation
